Blende Zn-Pb-Ag Deposit, Yukon

Blind Creek Resources Ltd.

- Focused on lead-zinc-silver and gold-silver property acquisitions, exploration and development in B.C., Yukon and N.W.T.
- 100 percent ownership of 3 drill-ready projects, including a fully permitted gold mine in B.C.
- Owns one of the largest undeveloped Zinc-Lead-Silver deposits in Yukon.
- 25.5 million shares issued
- 43% shares held by Company insiders.

Why Zinc?

- Zinc prices hit their highest level in 10 years on August 16, 2017, breaking the \$3,000-per-tonne mark to reach \$3,111. Supply concerns, a strong demand outlook from China and a decline in warehouse inventories support the rally. A deficit zinc market is projected over the next 4 years.
- Wood Mackenzie has a peak Zinc price target of \$4000 US/tonne (\$1.80 per lb) in 2018.
- “The best way for investors to play a zinc price move would be to invest in zinc equities.” James Fraser, editor of Mining Stocks Investor Guide.

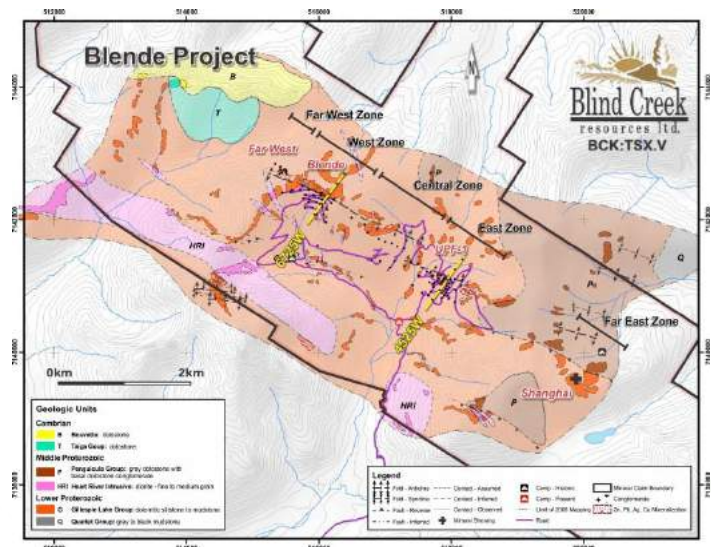

Engineer Gold Mine, Tagish Lake B.C.

Blende (Zn-Pb-Ag) Property, Yukon

- 100% owned, winter-road accessible 5,346 ha property situated 63 km northeast of Keno Hill Mines, Yukon. (Past production of 437 M lbs of Zinc, 711 M lbs of Lead and 214M oz Silver between 1913 – 1990; R.J. Cathro et.al., 2006)
- The largest carbonate-hosted Zn-Pb-Ag deposit in Yukon and one of the largest undeveloped deposits in Western Canada.
- Billiton (1991) historic open pit resource of 19.6Mt averaging 3.04% Zinc, 2.80% Lead and 56 g/t Silver (shallow, sulphide-only), representing 1.3B lbs of Zinc, 1.2B lbs of Lead and 35.3M oz of Silver.* Resource estimate **does not** include post 1991 Blind Creek infill and extensional drilling – 9,290 metres in 52 holes.
- >\$9.2M in acquisition and past exploration (\$5.2M by Blind Creek); includes 25,195 metres drilling in 132 drill holes.
- Mineralization corridor defined by drilling over an 8 km strike length and >700 metres vertical, demonstrating an overall grade increase at depth.
- Blende deposit remains open along strike and at depth, providing excellent potential for a combined open pit / underground mining operation.
- Recent advances in oxide Zn and Pb recovery processes offers potential grade and tonnage increase **up to** 50% with the inclusion of oxide mineralization.
- 2017 program including permit application, additional metallurgical studies, geochemical analyses, geological modeling, and resource estimation on-going. Results to be documented in a NI43-101 technical report currently in preparation to provide basis for PEA Study.

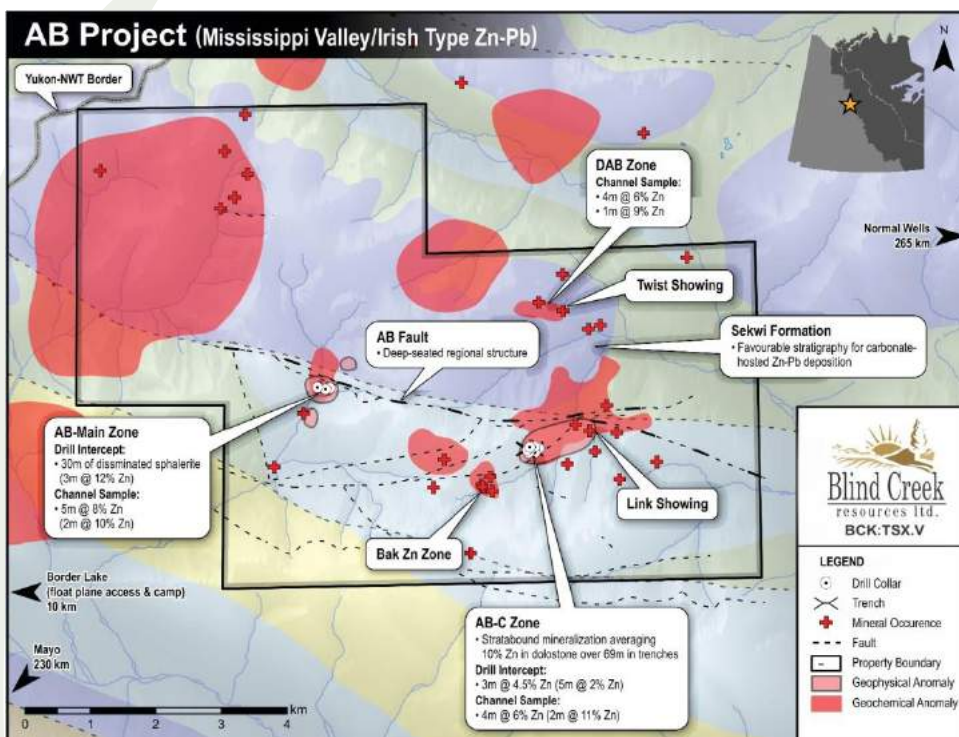

*The above mentioned estimates do not conform with National Instrument 43-101. Neither Blind Creek nor its consultants have completed sufficient work to verify the Historical estimates and these should not be relied upon for investment decisions. The estimates are referred to as Historical Resources. A qualified person has not done sufficient work to classify the historical estimate as current mineral resources or mineral reserves, the Company is not treating the historical estimate as current mineral resources or mineral reserves and the historical estimate should not be relied upon.

AB Property, N.W.T.

- 100% owned, drill-ready 3,000 ha. Mississippi Valley-Type Zinc-Lead property acquired on July 27, 2017.
- Located in the Mackenzie Mountains of the NWT, 263 km west of Norman Wells and 230 km to the NE of Mayo, Yukon.
- Previous exploration has located coincident geological, geochemical and geophysical features that may represent large buried MVT mineralized systems.
- Stratabound mineralization averaging 10% Zinc in dolostone over 69 metres in trenches.
- 1976 drill intercepts of 12% Zinc over 3 metres, 4.5% Zinc over 3 metres and 2% Zn over 5 metres.
- 2008 I.P. survey identified 2 anomalies measuring 500 metres and 1 kilometer long, respectively, over larger Zinc / Iron soil anomalies that have never been drilled.

Honey-sphalerite replacement mineralization in dolostone breccia

Zinc-oxide (Smithsonite) mineralization in dolostone breccia

TSX.V: BCK

Engineer Gold Mine, B.C.

- Blind Creek owns 100% interest in the fully-permitted, historic high-grade Engineer Gold Mine and mill, situated 32 km southwest of Atlin, B.C.
- Engineer Gold Mine produced 18,000 ounces gold and 9,000 ounces silver averaging 39 g/t Au and 18 g/t Ag, respectively in the 1920's.
- Recently enlarged 12,032 hectare property with >\$4.7M past expenditures.
- 2011 SNOWDEN NI 43-101 Inferred Resource (open to expansion) with **20,100 oz. gold grading 1.75 oz/ton gold (60 g/t) in 10,400 tonnes at 25 g/t Au Cutoff** on Engineer Vein.
- Fully permitted for surface and underground exploration and drilling, mine de-watering and small-scale, seasonal bulk sample production with operational 30 tpd gravity mill situated on patented crown grants.
- Under-explored "Porgera-style" epithermal system with > 25 known veins and 2 major shear structures providing excellent exploration upside for additional high-grade and large bulk-tonnage gold deposits.
- >8 km of untested, 2nd order shear structures known to host large bodies of hydrothermal breccias with gold and silver mineralization.
- Un-drilled 1.0 km X 0.5 km coincidental gold-silver-arsenic-antimony soil, magnetic and resistivity anomalies adjacent to 400 metre strike length of mineralized breccia averaging up to 0.45 g/t gold over 35 metres wide on Shear Zone "A".
- The Company is awaiting exploration results from a recently completed 2017 MMI soil survey targeting additional narrow-vein high-grade and shear-hosted bulk tonnage gold mineralization south of Engineer Mine (proper) and on the southern Wann claims. The Company has also recently received an updated NI 43-101 technical report on the Engineer Gold Mine Property. Recommendations and results provide the basis for a significant 2-Phase exploration and test-mining / milling program at the Engineer Gold Mine Property in 2018.
